Production technology is one of the key
branches of mechanical engineering. With
increase in the demand of different
products, production technology also
changed proportionally. Having such a
great advancement in the production of
products, there is a significant reduction of
human efforts and also production time is
reduced by one-fourth.

Cost-effective manufacturing of biopharmaceutical products is rapidly gaining in importance, while healthcare systems across the globe are looking to contain costs and improve efficiency. To adapt to these changes, industries need to review and streamline their manufacturing processes. This two volume handbook systematically addresses the key steps and challenges in the production process and provides valuable information for medium to large scale producers of biopharmaceuticals. It is divided into seven major parts: - Upstream

designers to understand how the technology affects the industry they work in, but also provides them with the skills and competencies they need to work in it smartly and effectively. This book is designed to satisfy this need. Book Production falls into two parts: The first part deals with the increasingly important role of production as project managers, a role which has not been adequately written about in any of the recent literature on publishing. The second part deals with the processes and raw materials used in developing and manufacturing print on paper products. Case studies are used to illustrate why and how some processes or raw materials may or may not be appropriate for a particular job. With expert opinions and case studies, and a consideration of the practices and issues involved, this offers a comprehensive overview of book production for anyone
