Breastfeeding in Combat Boots is a much needed resource for active-duty mothers and mothers-to-be, who are seeking information and support on how to breastfeed successfully while serving their country. Are you pregnant and in the military? Do you want to breastfeed, but just don't know how you can combine 12 hour shifts, training exercises, or deployment with breastfeeding your baby? Robyn Roche-Paull answers these questions and more in Breastfeeding in Combat Boots - A Survival Guide to Successful Breastfeeding While Serving in the Military. As a veteran of the United States Navy, mother of three breastfed children, International Board Certified Lactation Consultant, and La Leche League Leader, the author has helped many active-duty mothers breastfeed their babies. She has now compiled this knowledge into a comprehensive guide to help all mothers in the military breastfeed their babies successfully. Most services now have written policies in place to support breastfeeding and direct commanders to provide a place and time for pumping milk. However, even with the policies in place, military mothers face unique circumstances that can make breastfeeding successfully a challenge. This book was written to help military mothers overcome the challenges they face so they can provide the best nutrition for their babies. Some of the topics covered include: How do I get breastfeeding off to a good start in only six short weeks? Can I pump while in the desert for training exercises? Is my pump allowed onboard ship? Do I need to pump and dump if I've been exposed to JP-8? How do I deal with co-workers who do not support my pumping while on duty? These questions and more are answered in Breastfeeding in Combat Boots! In this book, the author provides military moms with insight into the rewarding and wonderful aspects of breastfeeding on active duty, while also giving a realistic look at the challenges that lay ahead. If you are an active- d

The desire exists within Governments to provide for those who are on the fringes of society. Therefore, indigenous approaches seem relevant in the redistribution of resources among citizens. This book is therefore not only essential, but also timely. Indigenous Social Security Systems in Southern and West Africa (ISSS) contributes to human service literature for Africa, Southern Africa and West Africa in particular. The richness of the book lies within the variety of contributions that encourage its origin. The book's value is extensive and captures many essential and current topics that have an appeal to academicians, policy makers, analysts and practitioners in the field of social welfare and social security. Ultimately, the book serves as a pragmatic and expedient tool for human service practitioners and any enthusiast of social security systems.

Acute organ damage and the ensuing multiple organ failure are the result of a pathophysiological process involving various cytokines. Once activated, these proteins cannot be eliminated even when the kidneys function at their maximum capacity. To counteract this mechanism, researchers in Japan have developed an innovative concept employing blood purification to remove the overwhelming cytokines. This book describes the use of hemodiafiltration to inhibit the cytokine storms which cause serious organ damage in patients with septic shock. Moreover, the technical construction of the blood purification system, which includes various machines, devices, membranes, fluids, etc., is explained in detail. Finally, leading experts discuss the concept of continuous renal replacement therapy as the standard care in critically ill patients with severe acute kidney injury. Describing the current state of acute blood purification, this publication provides new impulses and opens new avenues in the treatment of acute organ damage.

In Neoliberalism from Below—first published in Argentina in 2014—Verónica Gago examines how Latin American neoliberalism is propelled not just from above by international finance, corporations, and government, but also by the activities of migrant workers, vendors, sweatshop workers, and other marginalized groups. Using the massive illegal market La Salada in Buenos Aires as a point of departure, Gago shows how alternative economic practices, such as the sale of counterfeit goods produced in illegal textile factories, resist neoliberalism while

simultaneously succumbing to its models of exploitative labor and production. Gago demonstrates how La Salada's economic dynamics mirror those found throughout urban Latin America. In so doing, she provides a new theory of neoliberalism and a nuanced view of the tense mix of calculation and freedom, obedience and resistance, individualism and community, and legality and illegality that fuels the increasingly powerful popular economies of the global South's large cities.

Inside Indian Indenture is a timely and monumental work which makes a significant contribution to our understanding of South African Indian history. It tells a story about the many beginnings and multiple journeys that made up the indentured experience. The authors seek to trespass directly into the lives of the indentured themselves. They explore the terrain of the everyday by focusing on religious and cultural expressions, leisure activities, power relations on the plantations, the weapons of resistance and forms of collaboration that were developed in conflicts with the colonial overlords. Fascinating accounts brimming with desire, skulduggery and tender mercies, as much as with oppression and exploitation, show that the indentured were as much agents as they were victims and silent witnesses.

Tracing the Sudden Infant Death Syndrome (SIDS) diagnosis from its mid-century origins through the late 1900s, Rest Uneasy investigates the processes by which SIDS became both a discrete medical enigma and a source of social anxiety construed differently over time and according to varying perspectives. American medicine reinterpreted and reconceived of the problem of sudden infant death multiple times over the course of the twentieth century. Its various approaches linked sudden infant deaths to all kinds of different causes—biological, anatomical, environmental, and social. In the context of a nation increasingly skeptical, yet increasingly expectant, of medicine, Americans struggled to cope with the paradoxes of sudden infant death; they worked to admit their powerlessness to prevent SIDS even while they tried to overcome it. Brittany Cowgill chronicles and assesses Americans' fraught but consequential efforts to explain and conquer SIDS, illuminating how and why SIDS has continued to cast a shadow over doctors and parents.

This book examines how the adaptability and innovation of small-scale aquaculture farmers have been crucial to success in the region. It describes the relationship between aquaculture development in Asia to natural systems, social conditions and economics.
