Android Application Development for
GPS Based Location ...

NMEA GPS Driver. Location user drivers allow your app to publish updates to the device's physical location through the Android location services . The API supports constellations of the Global Navigation Satellite System (GNSS), such as the Global Positioning System (GPS). GNSS modules are receive-only devices that triangulate signals from remote satellites in order to determine an accurate physical location.

Getting GPS Data from Android Because Android's source code is open, there are a lot of goodies that anyone with an Android device and Google's development kit can explore. I was digging through the API section regarding location services when I found the method `getSatellites ()`. How can you resist a method that sounds that cool?
