«In Italia tuttologi stregoni e oroscopi sono più considerati del parere medico» Giuseppe Mancia è il massimo esperto al mondo di ipertensione: «Misure drastiche necessarie. Solo con la paura si seguono le regole».

Italian medical charlatans, wandering quacks who traded in remedies, accompanied real medicine like a dark shadow during its slow progress. Over the centuries, these cunning individuals infuriated orthodox physicians with their ability to capture audiences in village squares. While licensed physicians imperiously ordered torrential enemas and pitiless bloodletting, charlatans sold cheap remedies accompanied by consoling promises. Not merely merchants committed to swindling the gullible, the charlatans often disguised a form of opposition to an arrogant new science. New and courageous ideas were hidden beneath their exaggerated posturing. This work recounts the history and adventures of ingenious Italian medical quacks who were sought after and imitated all over Europe. The research is culled from judicial proceedings, newspaper articles, Italian State Archives, and books and manuscripts from all over the world. Ostensibly an account of these characters covering five centuries, the book also examines the relationship between doctor and patient and the placebo effect. The final chapters explore the reasons for their success and the necessity for a re-evaluation of the relationship between doctor and patient today, a period in which the practice of medicine is often confined to laboratory examinations and brief, impersonal encounters.

What exactly happens between the patient and the analyst when therapy is effective? Profoundly unsatisfied by the orthodox but vague explanation that "the therapeutic factor is the relationship", the author explores a hypothesis that is able to comprehend many different methods of both therapy and analysis. Starting from his own clinical experience, the author runs into the image of the classical labyrinth (Daidalón) and a deeper analysis of what this symbol implies, revealing it as a symbol of "Possibility". The worldwide presence in different cultures and ages of the labyrinth as such a symbol may indeed point to the existence of an element beyond it, whose activation in the relationship between patient and analyst could be a fundamental factor for psychic change. Different methods of cure, seen through the lenses of the hypothesis expressed, may share a common factor of transformation. With the help of clinical cases, the concept of "impossibility" in analysis is also explored.

Questo saggio presenta ai lettori il percorso di ricerca umano, professionale ed intellettuale di Piero Coppo, Rosa Giove e Jacques Mabit, tre medici che hanno saputo costruire dei concreti canali di comunicazione tra la medicina scientifica occidentale, cui devono la loro formazione, e generi di terapia radicalmente diversi, fondati sull'esperienza dell'incontro con entità personificate e invisibili, spiriti, demoni e divinità, dalle quali viene ritenuto dipendere lo stato di salute e malattia degli esseri umani. Questi tre medici hanno costruito realtà terapeutiche operative ed efficaci, centri di irradiazione di visioni culturali capaci di trasformare profondamente ed arricchire la concezione medica dominante nelle attuali società della globalizzazione. Il primo di questi centri è la Scuola di Specializzazione in Psicoterapia ad indirizzo etnopsicoterapeutico Sagara di Pisa, rappresentante italiano di un più ampio movimento internazionale che si riconosce nel termine di etnopsichiatria, e trova la sua principale espressione a livello internazionale nel Centro Devereux di Parigi. L'altro è il Centro Takiwasi di Tarapoto, nell'Amazzonia peruviana, dove dal 1992 viene affrontato, con validi risultati, il problema della tossicomania integrando la medicina tradizionale amazzonica impiegata dagli sciamani con la psicoterapia e la scienza medica occidentale.
