Viruses And Prokaryotes Study Guide

Intro to Prokaryotes and Viruses.

Prokaryotes are microscopic organisms that include the domains Bacteria and Archaea. Prokaryotes lack a nucleus, and they have no organelles except ribosomes. The hereditary material exists as a single loop of double-stranded DNA in a nuclear region, or nucleoid.

Prokaryotic cells multiply by an asexual process called binary fission.

Biology Viruses and prokaryotes study guide Flashcards ...

Viruses consist of a central core of either DNA or RNA surrounded by a coating of protein. The core of the virus that contains the genes is the genome, while the protein coating is the capsid. Viruses have characteristic shapes. Certain viruses have the shape of an icosahedron, a 20-sided figure made up

PROKARYOTES AND VIRUSES ...  
-A virus enters a cell and immediately  
starts running copies of itself and  
causes the cell to  
burst(lyse).-Bacteriophage T4 creates  
this type of infection.-It has a DNA  
core inside a protein capsid that binds  
to the surface of the host cell.-The  
virus then injects its own DNA into the  
cell, and this cell starts to make mRNA  
from the viral genes.

## and Study Guides

Prokaryotes include several kinds of microorganisms, such as bacteria and cyanobacteria. Eukaryotes include such microorganisms as fungi, protozoa, and simple algae. Viruses are considered neither prokaryotes nor eukaryotes because they lack the characteristics of living things, except the ability to replicate (which they accomplish only in living cells).
