Dennis Overholser, longtime technical specialist for Painless Performance Products and avid hot rodder, walks you through nine chapters sure to clear away your fear of electricity. Topics include: the basics of DC electricity; installation of additional circuits; choosing and installing the best battery, starter, and alternator; installation of the gauges; finding and installing a new EFI harness; and wiring a complete scratch-built hot rod. Photo-intensive, hands-on sequences document and help explain the installation of both an EFI harness on a late model V-8, and the installation of a complete harness kit into a newly built hot rod.
