Roy Underhill brings to woodworking the intimate relationship with wood that craftsmen enjoyed in the days before power tools. Combining historical background, folklore, alternative technologly, and humor, he provides both a source of general information and a detailed introduction to traditional woodworking. Beginning with a guide to trees and tools, The Woodwright's Shop includes chapters on gluts and mauls, shaving horses, rakes, chairs, weaving wood, hay forks, dough bowls, lathes, blacksmithing, dovetails, panel-frame construction, log houses, and timber-frame construction. More than 330 photographs illustrate the text.

Wood bending is intriguing to the vast majority of woodworkers, but until now most have not had access to the information they need to add it to their repertoire. This highly visual book and DVD changes that. It features step-by-step instruction on some of the most common techniques. Expert Lon Schleining explains and demonstrates both steam bending (where steam relaxes wood fibers so they can be shaped when clamped to a bending form) and bent lamination (where thin strips of wood are glued together, then clamped to a bending form). Schleining shows just how easy it can be to master these techniques, even using relatively low-tech equipment.

This book is a celebration of reclaimed wood and the beautiful range of possibilities that exists for its creative use. Through technique discussions, ideas for sourcing wood, coverage of safety concerns, detailed photographs and helpful case studies, this guide helps you plan and execute your own reclaimed wood projects. Whether you're interested in sourcing reclaimed wood for environmentally-conscious reasons or tapping into the history or story behind the wood, this guide will walk you though every aspect of using this wonderful material.
